Fig. 1 Combination valve

General information

A combination valve fitted between the discharge pipe and the discharge flange of a Grundfos pump gives the following advantages:

- The combination valve combines three valves in one: shut-off valve, balancing valve and check valve.
- The combination valve provides the feature of changing the flange orientation to allow 90 ° pipe connection.
- The combination valve makes it possible to reduce the overall system pressure drop since fewer individual components are needed when installing a pump.
- The combination valve is easy to dismantle and service. Internal parts, such as the disc can be easily removed and/or replaced.
- The combination valve has a built-in bypass valve allowing for drainage of water upstream of the check valve. (See Fig 3. and Fig 4.)
The bypass valve **MUST** be **CLOSED** at all times in normal operation.
The bypass valve should **ONLY** be used by authorized personel to drain water from the piping above.

Combination valve range

Combination valves are available with ANSI 125 flanges and ANSI 250 flanges, see technical data below, and a variety of sizes ranging from 2 inches to 14 inches suction and discharge ports, see dimensional table.
